Do you want to be part of our research team in Västerås?

SICS Swedish ICT Västerås is a research institute with the aim to strengthen the innovation system in the Mälardalen region by offering applied research to both private and public organizations. Our projects typically involve a team of researchers and focus on delivering tangible results that create immediate and long-term value, based on the latest research results. We are constantly growing and are looking for researchers who enjoy the challenge of working in close collaboration with industry.

SICS Västerås has a flexible organization that develops and applies methods and solutions in close collaboration with industrial, public and academic partners. Our core values are to be open-minded, value-driven, research-oriented, and to have fun!

We are now looking for additional excellent people to strengthen our team in the following areas:

- Behavioural science – what is efficient team work?
- Project management – what are the success factors for projects?
- Test of industrial systems – which models and methods are applicable in different use cases?

As a researcher, you will be part of our team and work in existing projects as well as contribute to new ideas and new projects.

Working at SICS is an exciting experience with a variety of tasks and a high degree of flexibility.

People in our team are:

- able to work independently, as well as in teams;
- skilled in documenting and presenting their work, i.e. to describe problem, solution and approach in English in an understandable manner;
- interested in developing methods and bringing them into different application areas;
- curious, goal-oriented, flexible, ambitious and communicative;
- comfortable with a research oriented way of working.

We are currently looking for following positions:

**Behavioural scientist with an interest for human-digitalization-interaction**

- Experience of work with behavioral changes within working life
- Experience of coaching or supervising

It is an advantage if you have psychology background (positive psychology) and experience of working with management and leadership.

**Project leader or product development leader**

- Experience of team leading
- Experiences of lean/agile methods

It is an advantage if you hold a PhD in software development, innovation management or product development and/or if you have experience of process development.
Senior researcher in software testing

- PhD in computer science or software engineering
- An interest in software development and testing
- General knowledge in software testing, and in particular: test case prioritization, test suite optimization, integration testing methodology
- Expertise in search-based testing
- Experience of static analysis, in particular in areas such as path-based testing
- Familiarity with model-based testing and model-checking techniques is a plus

It is an advantage if you have industry experience, in particular with software testing.

All three positions have a primary location in Västerås, but close collaboration with our office in Kista.
SICS Swedish ICT Västerås AB, Exspectrum in Västerås.
Welcome with your application, we will start with on-going interviews in March.

To apply, please send your application and CV to:
